SKILLS

- Good leadership skills. Such as coming up with ideas so that productivity increases. Making sure that other co-workers are okay, helping if necessary .
- Ability to work under pressure in order to meet deadlines.
- Good time management. Ability to manage time in the most efficient way to ensure completion of tasks.
- Self motivated. Understands the steps needed to keep workflow. Willing to take extra steps like slowing down to make sure everything is going as should. Understands if starting early/staying late is required.
- Creative thinking.
- Speaks fluent English and Spanish.

EXPERIENCE

Dollar Tree,1254 State Ave, Marysville WA,98270- *Cashier*

August 2015' - October 2015'

My job as a cashier consisted of greeting customers as they walked in, pointing them to the right aisle, and helping them with any other questions. I would also help clean up the store and pick up any trash left, put away items that were left or unwanted. I learned to stock shelves, and make the main part of the store look as pleasing as possible.

Reality Plastics INC., 4700 56th PI NE Ste C, Marysville, WA 98270- *Employee/Laborer*

January 2016 - July 2016

My Job at Reality Plastics was making plastic balloon weights for Nordstrom, packaging them away, and finally putting them on a pallet to be shipped. I filled out certain paperwork to help keep track of how many weights I made, I kept track of how much material was left and I made sure that there were not that many spoils. Which included me making sure the speed on the machine wasn't too fast, and that the heat was at the perfect temperature. While working here I learned a little bit of assembling. Mainly

toy airplanes. I set up all the right parts, and put them together accordingly making sure that they all worked and that there weren't any broken ones.

I operated other machines that make screws, valves, and plastic containers. Other things included learning to mix materials needed for the next job.

Design Matrix Group LLC., 3923 88th St. NE Marysville WA, 98270 - Operator

August 2016 - September 2019

When I first started here I learned how to help take out garments and put them away in boxes once they had been printed. I filled out the purchase order making sure that all the pieces were there, if not then I'd make notes and tell my boss. Next I learned to wash silk screens, using chemicals to remove the emulsion, and ink used on the screen. Prepping them to be used again. I later went onto learning embroidery by machine. This took about 3 months to really get a feel for it, to learn how to operate the computer portion of it. This meant grabbing my floppy disc, getting the design, reading it, putting in the position I wanted and the colors. Setting up also meant measuring how much space I needed in order to have the logo on a hat in the correct spot. I have been running/embroidering hats for a little over a year now. Along the way I've learned to find jobs on my own, File away paperwork, label boxes, I've put away boxes from UPS, and I've been trusted to stay late at night in the shop and close up for the night. As well as make orders official, by filling out a job order form. And even calling customers or talking to them when they walk in occasionally.

Safran Cabin INC., 12810 State Ave, Marysville, WA 98271-CNC/Tool Prep

September 2019- May 2020

My job at Safran was to operate a CNC machine that cut out shapes from a big roll of carbon fiber material. These parts resembled puzzle pieces or stickers as the carbon fiber could be removed from a plastic layer. These pieces were then put together in order from A-T, and 1-17. They would then be molded and essentially baked in an oven to form a grill like structure. To later be a part of an airplane wing engine. This entire process and part is to help create an eco friendly option when the plane begins to descend. When starting my shift I would start by putting on my lab coat, and safety glasses. Putting on gloves and stepping into my area followed by asking the previous operator if there were any issues during the shift, taking inventory of orders in the freezer. Looking onto our whiteboards for the latest paperwork changes, procedure changes, and checking what orders have been done and what needs to get done. After getting up to date with any news, and or concerns I would select an order to start, when I did this I had to use a special program to tell the machine what to cut. This required me to select a file, drag it over to our cutting program, and make sure the machine knows what tools to use at what

times. Then I would set a reference point and begin; making sure that what is being done is correct. If not stopping immediately. When my shift came to an end I had to clean my area, make sure orders have been completed and the correct paperwork is attached, update our whiteboards with the inventory, and look over tracking sheets to make sure everything has been recorded. Ensure the machine is ready for the next operator updating them with any changes or issues that may have happened.

EDUCATION

Marysville Getchell High School, 8301 88th- *Graduated*

September 2012 - June 2015

As a student my first couple years were okay. I was still nervous about others and having more assignments and keeping in mind that I needed x amount of credits to graduate. But academically I was not doing as well as my peers. The last couple of years were spent growing and really taking in the knowledge so that when testing came I was ready. Doing homework regularly. Actually asking for help when given the chance. And staying on track by doing extra work, staying after school, asking peers who understood a little better, and taking lots of notes. Overall highschool was a bigger learning experience that has helped me in my career/job.
