- Used Daily: Python, Java, C#, Git, Linux Administration
- Familiar with: C/C++, Lisp, Erlang, PHP, Apache, Javascript, Raspberry Pi/ Arduino, SQL, Active Directory, Exchange, XML, JSON

EXPERIENCE

APA Services, Fort Worth TX

January 2020 - June 2020

- Worked as a Sysadmin as part of a 2 person IT department.
- Managed our Active Directory domain and our main web server, a LAMP stack.
- Worked to prepare our on-prem applications for cloud Deployment, and to update current systems to best practices.

Avior Data, Lewisville TX

August 2019 - January 2020

- Maintained a legacy tax engine written in Python, updating with changing tax law, and expanding to additional states/industries.

AdComp Systems, Lewisville TX

June 2018 - August 2018

- Refactored legacy C# code to break it into manageable modules, and to use them to implement new solutions.
- The main original solution was a parking kiosk that had to query the server for every car that drove by. I built the server, using the now modular legacy system as the client.

Triplecheck, Lewisville TX (defunct startup)

September 2016 - November 2017

- Worked to create a Minimal Viable Product out of the founder's command line Java app, making it into a webapp that could be sold.
- Primarily worked on integrating the core business logic into a LAMP stack for demonstration purposes.
