Github: https://github.com/vick119

SUMMARY:
Curious and ambitious learner who strives on creating and building with rigorous professionals. A great addition of problem solving skills, logical thinking and patience of trusting the process to accomplish team goals in software development.

EDUCATION:

Certificate of Achievement, Fullstack Web Development, Coding Dojo	**February 2021**
Computer Science Major, Cascadia College, Bothell, Washington	**Expected graduation: May 2023**

TECHNICAL SKILLS: ## ALGORITHMS:

➔ AWS (EC2)	Ajax/ API	1. Arrays
➔ HTML/JavaScript	Bcrypt	2. Dictionaries
➔ Python/ Django	CSS/ Bootstrap	3. Recursion
➔ MERN (Mongo, Express, React, NodeJs)	Web Design	4. Singly Linked List
➔ Github/Git Bash	OOP	5. Binary search trees

PROJECTS:

Workout Application: Tech Used: |Python, React, html, CSS, Bootstrap,shell|
- This application was a solo project I did at Coding Dojo. In this application I built a social platform where a user can upload workouts and add them to their favorites page so they can reuse these workouts for different gym sessions. Logically the problem I'm trying to solve is creating a platform of workout ideas with their written instruction for users.

VARFIT: |https://varfitness.myshopify.com/| Tech Used: |Shopify, Amazon FBA, html|
- VARFiT is my ecommerce store that I developed to dropship meal prep containers. This idea began when I needed to make some extra income when I was expecting my baby girl, I invested some money and started selling products on Amazon utilizing their FBA program. From the success of dropshipping meal prep containers I created a website on shopify's platform to expand with more products to satisfy customer needs and niche competition.

Book Review: |**http://52.53.222.38/**| Tech Used: |Python, html, CSS, Bootstrap,shell, GitBash,Github|
- This was a group project we developed at coding dojo. Overall we wanted to build a book review page where a user could review a book and other users can comment and conversate about that book. My responsibility was to the back-end which involved creating the login and registration page, making sure the user can post , edit and delete a review and also contributed to the styling and design of the application.

WORK EXPERIENCE:

Encore Cabinet and Millwork   Tools used: |Drill, Saw,Tape Measure,Blueprints,Calculator| **March 2020 - 9//20**
- At Encore my responsibility was to assemble all the drawer parts together at the right size so they could fit in the cabinet. As a team everyone had their own section to assemble for the cabinet and at the end the project was put together to become one.

Amazon FBA Sales   **April 2017 - Present**
- Amazon FBA/Shopify has been a source of income for 3 years. When I developed my website to dropship meal prep containers I sparked a passion in software development and ever since 2017 I have been learning to code and develop professionally, from personal projects to completing a full stack web development bootcamp course.

Staging and Design Network   **Jun 2018 - 2018**
- Staging and design was another customer based job. As a warehouse truck driver my responsibility was to deliver furniture so stagers can decorate real estate properties as they await for sales. This was a good source of incoming as I was going to school.
