Travis Alford

I am an IT specialist with 10+ years of experience in many areas involving information technology. I have been running a web development business for a few years now and am looking to get back into networking and the hardware end of the industry.

- Windows
- Osx

- Javascript
- Wordpress
- jQuery
- XML
- REST
- SOAP

- PostgresSQL
- MySQL
- Microsoft SQL Server
- Node.js
- React
- Git
- PHP
- UI/UX
- APIs
- AWS

2017 to Present

Chief Technology Officer
Rain Assembly Inc.

I create online presence solutions for businesses including front and back end web development, seo, and social media marketing.

2018 - 2019

Front-end Developer
The 861 Groupe

I was responsible for creating web projects and all assets necessary to create said projects. Graphic design utilizing Adobe software such as Photoshop and Illustrator was a common task.

2014 – 2017
IT Manager/Front End Developer
Moon Valley Sofware

I was initially brought on for a data entry position and within two months was moved to the IT department due to my experience with Linux. Shortly afterwards I was promoted to IT manager. As IT manager I oversaw in house redundant servers for always on capabilities. I managed user accounts and workstations through in-house Active Directory. I built and maintained an in-house email server utilizing Postfix and Dovecot running on Ubuntu Server. Once I earned my degree, I transferred to the development department and started as a front-end developer building web tools utilizing the React framework.
